Listing first 272 summaries

us-09-930-503a-6.sl.rn14.*

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RESULT 270
US-09-015-188-6/c
; Sequence 6, Application US/09015188C
; Patent No. 6399358
; GENERAL INFORMATION:
; APPLICANT: Williams, Kevin J
; APPLICANT: Tabas, Ira
; TITLE OF INVENTION: A Human Gene Encoding Human Chondroitin
; FILE REFERENCE: JEPF-0231
; CURRENT APPLICATION NUMBER: US/09/015, 188C
; CURRENT FILING DATE: 1998-01-29
; NUMBER OF SEQ ID NOS: 17
; SOFTWARE: Patentin Ver. 2.0
; SEQ ID NO 6
; LENGTH: 15
; TYPE: DNA
; ORGANISM: Artificial Sequence
; FEATURE:
; OTHER INFORMATION: Description of Artificial Sequence: Primer
US-09-015-188-6

Database : us-09-930-503a-6.sl.rnpbm4:*

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Database : us-09-930-503a-6.sl.rnpbns4:*

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Database : us-09-930-503a-6.sl.rng4:*

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PS Disclosure; Page 21; 46pp; English.
XX
CC The invention relates to the use of a tachykinin antagonist in the
CC manufacture of a medicament for treating e.g. a disease mediated by
CC binding of a tachykinin ligand to its platelet associated receptor. A
CC method of identifying an antagonist or agonist of tachykinin having a
CC platelet associated tachykinin receptor involves contacting a compound to
CC be evaluated with platelets expressing the tachykinin receptor in the
CC presence of the tachykinin and monitoring for an increase or decrease of
CC platelet aggregation. The agonist is useful in the manufacture of a
CC medicament in bulk quantities for treating a disease or conditions
CC mediated by binding of a tachykinin ligand to its platelet-associated
CC receptor (e.g. thrombosis), and by a failure of or a reduced ability of
CC platelet having a tachykinin receptor to aggregate normally in the
CC presence of the tachykinin; antagonizing or stimulating the effect of
CC tachykinin on platelet associated tachykinin receptor; and stimulating
CC platelet aggregation (e.g. wound healing). Sequences ADN12182-ADN12193
CC represent PCR primers for amplifying tachykinin receptors NK1, NK2 and
CC NK3.

PS Disclosure; Page 21; 46pp; English.

CC The invention relates to the use of a tachykinin antagonist in the
CC manufacture of a medicament for treating e.g. a disease mediated by
CC binding of a tachykinin ligand to its platelet associated receptor. A
CC method of identifying an antagonist or agonist of tachykinin having a
CC platelet associated tachykinin receptor involves contacting a compound to
CC be evaluated with platelets expressing the tachykinin receptor in the
CC presence of the tachykinin and monitoring for an increase or decrease of
CC platelet aggregation. The agonist is useful in the manufacture of a
CC medicament in bulk quantities for treating a disease or conditions
CC mediated by binding of a tachykinin ligand to its platelet-associated
CC receptor (e.g. thrombosis), and by a failure of or a reduced ability of
CC platelet having a tachykinin receptor to aggregate normally in the
CC presence of the tachykinin; antagonizing or stimulating the effect of
CC tachykinin on platelet associated tachykinin receptor; and stimulating
CC platelet aggregation (e.g. wound healing). Sequences ADN12182-ADN12193
CC represent PCR primers for amplifying tachykinin receptors NK1, NK2 and
CC NK3.

XX
CC This PCR primer was used with AAQ37208 to amplify the predicted human
CC substance P receptor coding region from IM-9 cDNA. The amplified fragment
CC was blunt end ligated into SmaI-digested pBS. Transformsants were further
CC analysed by restriction mapping and by sequence analysis. One cDNA was
CC isolated after restriction with HindIII and BamHI (present in the pBS
CC polylinker) and made blunt ended with Klenow, as was pM2 after BamHI
CC digestion. The cDNA was ligated to pM2 and used to transform E. coli XL-1
CC Blue cells by electroporation. (Updated on 25-MAR-2003 to correct PN
CC field.)

Screening for therapeutic agents, useful for treating a disease, e.g.
PT cardiovascular, infections, dermatological, cancer, inflammation,
PT respiratory, or neurological, comprises contacting a test compound with a
PT tachykinin receptor 1.
XX
XX Example 2; SEQ ID NO 5; 118bp; English.
XX

The invention relates to a method of screening for therapeutic agents
CC useful for treating a disease, comprising contacting a test compound with
CC a tachykinin receptor 1 (TACR1) polypeptide or polynucleotide, detecting
CC binding of the polypeptide or polynucleotide, determining the activity of
CC TACR1 at a certain concentration of the test compound, in the absence of
CC the compound or in the presence of a known regulator of the TACR1
CC polypeptide. The invention also relates to a method of diagnosing a
CC disease in a mammal comprising determining the amount of a TACR1
CC polynucleotide in a sample taken from the mammal and determining the
CC amount of TACR1 polynucleotide in healthy and/or diseased mammals, a
CC pharmaceutical composition for treating diseases in a mammal comprising a
CC TACR1 polynucleotide or polypeptide or a therapeutic agent which binds to
CC or regulates the activity of a TACR1 polypeptide, and preparing a
CC pharmaceutical composition useful for treating diseases in a mammal. The
CC disease is chosen from cardiovascular diseases, infections,

dermatological diseases, gastrointestinal diseases, cancer, inflammation,
CC metabolic disorders, hematological diseases, respiratory diseases,
CC musculoskeletal diseases, neurological diseases, gynecological disorders
CC and genitourinary diseases. This sequence represents a probe used in
CC expression profiling of the human TACR1 cDNA of the invention. The probe
CC is labeled with FAM (carboxyfluorescein succinimidyl ester) as a reporter
CC dye and TAMRA (carboxytetramethylrhodamine) as a quencher.

New isolated nucleic acid with at least one polymorphic position, useful
PT for detecting, diagnosing and treating disorders such as angioedema,
PT cancer, viral, bacterial or fungal infection, cardiovascular and
PT autoimmune diseases.
XX
XX Example 3; Page 932; 977bp; English.
XX

The invention relates to an isolated nucleic acid from a human gene
CC encoding aminopeptidase P (XPNP2), bradykinin receptor B1 (BDKRB1),

CC tachykinin receptor B1 (TACR1), C1 esterase inhibitor (C1NH), kallikrein
 CC 1 (KAL1), bradykinin receptor B2 (BKR2), angiotensin converting enzyme
 CC 2 (ACE2) or protease inhibitor 4 (PI4), comprising at least one
 CC polymorphic position. Also included are (1) a probe that hybridizes to a
 CC polymorphic position as provided in the detailed summary of single
 CC nucleotide polymorphisms comprising additional 5' and 3' flanking genomic
 CC sequence; (2) analysing (M1) at least one nucleic acid sample comprising
 CC obtaining the sample from one or more individuals and determining the
 CC nucleic acid sequence at one or more polymorphic positions in a gene
 CC encoding a protein selected from the group above; (3) constructing (M2)
 CC haplotypes using the genes comprising grouping at least two nucleic acids
 CC ; (4) identifying (M3) an individual at risk of developing a disorder
 CC upon administration of an ACE inhibitor and/or vasopeptidase inhibitor
 CC using the polymorphic data; (5) a library of nucleic acids, each of which
 CC comprises one or more polymorphic positions within a gene encoding a
 CC human protein selected from the group above; and (6) genotyping (M4) an
 CC individual comprising obtaining a nucleic acid sample, determining the
 CC nucleotide present in at least one polymorphic position, and comparing at
 CC least one position with a known data set. The genes, (M1, M2, M3 and M4)
 CC and compositions are useful for detecting, diagnosing, treating,
 CC preventing various disorders such as angioedema and diseases which
 CC involve angiogenesis like haemangiomas, tumours, sarcomas, Crohn's
 CC disease, trachomas, and cardiovascular diseases like angina pectoris,
 CC hypertension, heart failure, myocardial infarction, ventricular
 CC hypertrophy, vascular diseases, aneurysm, embolism, thrombosis, coronary
 CC artery disease, arteriosclerosis and/or atherosclerosis, and
 CC hypersensitivity reactions, sepsis, autoimmune diseases, inflammatory
 CC arthritis, cancer, wounds, viral, bacterial or fungal infection, Chronic
 CC obstructive pulmonary disease (COPD) and enterocolitis (many other
 CC diseases and disorders are listed in the specification). The
 CC polynucleotides are also useful for chromosome identification. Antibodies
 CC against the proteins may be utilised for immunophenotyping of cell lines
 CC and biological samples. The present sequence is a genotyping PCR primer
 CC for the gene encoding one of the proteins listed above, using the method
 CC of automated genetic bit analysis, GBA

PT Ligand peptide for G protein-coupled receptor - acts by modulating
PT function in the central nervous system, pancreas and pituitary gland.
XX
PS Example 4, Page 104, 258pp; English.
XX
CC AAV02408 and AAV02407 are PCR primers used to amplify a region of the G
CC protein-coupled receptor from mouse pancreatic beta-cell strain MIN6. The
CC resulting fragment is used in an assay to monitor ligand binding to
CC receptor proteins. Pharmaceutical compositions containing such ligands
CC may be used as a pituitary function modulator, a central nervous system
CC modulator or a pancreatic function modulator. These ligands could have
CC specific applications as a prophylactic or therapeutic agent for
CC dementia, depression, hyperkinetic syndrome, disturbance of
CC consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone
CC secretory disease, hyper- and polyphagia, hypercholesterolemia,
CC hyperglycemia, hyperlipidaemia, hyperprolactinemia, diabetes,
CC cancer, pancreatitis, renal disease, Turner's syndrome, neurosis,
CC rheumatoid arthritis, spinal injury, transient brain ischaemia, asthma,
CC amyotrophic lateral sclerosis, acute myocardial infarction, epilepsy,
CC spinocerebellar degeneration, bone fracture, trauma, atopic dermatitis,
CC osteoporosis, infertility and/or oligogalactia. Assays can also be
CC developed to screen compounds which are capable of altering the binding
CC activity of the ligand thus affecting activation of the G protein-coupled
CC receptor protein

PT New polypeptide ligand for orphan G protein coupled receptors - used for
PT treating disorders of central nervous system, pituitary and pancreas, and

PT for drug screening.
XX
PS Example 4, Page 98, 206pp; English.
XX
CC The invention relates to a murine pituitary-derived ligand polypeptide
CC which is a ligand for the G-protein coupled orphan receptor designated
CC GPR10 (human) or UHR-1 (rat). Cells transformed with a vector containing
CC the ligand polypeptide encoding DNA are used to produce a recombinant
CC ligand polypeptide. The ligand polypeptide, and its fragments, modulate
CC function of the pituitary, central nervous system, pancreas and other
CC tissues and can be used to screen for agents that modulate binding of the
CC polypeptide to the receptor to quantify the amount of receptor in a
CC sample and to raise antibodies. They may also be used therapeutically,
CC e.g. to treat senile dementia, Alzheimer's, Parkinson's or Huntington's
CC diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs;
CC diabetes; schizophrenia; disorders of growth hormone secretion; cancer;
CC rheumatoid arthritis, epilepsy and many others, also to improve post-
CC operative nutritional status and as vasopressor. Transgenic animals
CC carrying the ligand polypeptide encoding DNA or its mutin are used to
CC study the function of the polypeptide-expressing genes, as models of
CC disease, for drug screening and as source of cell lines. The ligand
CC polypeptide DNA is used as a source of probes and primers; to identify
CC related sequences; in receptor-binding assays; for production of Ab and
CC antisera; in drug development; for gene therapy and to develop transgenic
CC animals. Primers AAV81237-238 are used for the PCR amplification of the
CC cDNA encoding a mouse MIN6-derived G-protein coupled receptor protein

XX
XX Treating pathological condition involving neurokinin receptor-1, e.g.
XX pain or inflammation, by administering oligonucleotide or a non-
XX nucleotide disruptor compound which modulate NK-1 receptor biosynthetic
XX pathway.
XX
XX
XX Claim 24; Page 20; 100pp; English.
XX
XX The invention relates to a method of treating a pathological condition
XX characterised partially by involvement of neurokinin receptor-1 (NK-1)
XX receptor, especially treating, attenuating or preventing pain or
XX inflammatory condition. The method comprises administering to a mammal, a
XX compound chosen from an oligonucleotide, its analogue, and a disruptor
XX which interferes with function or production of NK-1 receptors. The
XX method is useful for treating a pathological condition characterised by
XX involvement of NK-1 receptor such as dermatological, immune, autoimmune,
XX cardiovascular, vascular disorders (e.g. migraine), airway, neuropathic,
XX psychiatric and central nervous system disorders (e.g. anxiety,
XX psychosis, schizophrenia), gut inflammation, arthritis, and central or
XX peripheral aspects of chronic or acute pain, and for treating,
XX attenuating or preventing pain or inflammation such as peripheral,
XX chronic, acute pain or inflammation, neuropathic pain, inflammation or
XX pain relating to psychiatric disorders and central nervous system
XX disorders, including hyperalgesia, allodynia, neuralgia and dysesthesia
XX in a mammal, in particular human. NK-1 receptor related disorders,
XX diseases, or pathological conditions treatable by this method include
XX respiratory conditions (e.g. asthma, allergic rhinitis), ophthalmic
XX conditions (e.g. conjunctivitis), cutaneous/dermatological conditions
XX (allergic dermatitis), intestinal conditions (e.g. ulcerative colitis and
XX Crohn's disease), cardiovascular conditions (e.g. chronic
XX gastrointestinal tract inflammation, and inflammatory diseases such as
XX inflammatory bowel diseases. Other disorders and diseases include
XX cardiovascular pathologies including stroke, chronic inflammatory
XX diseases such as rheumatoid arthritis, demyelinating diseases such as
XX multiple sclerosis, small cell lung cancer, depression, hypersensitivity
XX disorders such as allergies and poison ivy, vasospastic diseases such as
XX angina, addiction disorders such as alcoholism, neurodegenerative

disorders such as acquired immune deficiency syndrome (AIDS) related
CC dementia, epilepsy, Alzheimer's disease, and other neuro-pathological
CC disorders such as peripheral neuropathy, oedema, stress related and
CC somatic disorders, and osteoarthritis. Antisense oligonucleotides
CC effectively treat chronic conditions and other pathological states
CC without the co-administration of substance P, and reduce the number of
CC activated receptors while not reducing the number of quiescent NK-1
CC receptors. Receptors not chronically stimulated are less affected,
CC reducing side effects of treatment. ABEK63814-ABK63906 represent NK-1
CC receptor coding sequences and oligonucleotides of the invention

 CC The invention relates to an isolated nucleic acid from a human gene
 CC encoding aminopeptidase P (XPNP2), bradykinin receptor B1 (BDKRB1),
 CC tachykinin receptor B1 (TACR1), C1 esterase inhibitor (C1NH), kallikrein
 CC 1 (KKL1), bradykinin receptor B2 (BDKRB2), angiotensin converting enzyme
 CC 2 (ACE2) or protease inhibitor 4 (PI4), comprising at least one
 CC polymorphic position. Also included are (1) a probe that hybridizes to a
 CC polymorphic position as provided in the detailed summary of single
 CC nucleotide polymorphisms comprising additional 5' and 3' flanking genomic
 CC sequence; (2) analysing (M1) at least one nucleic acid sample comprising
 CC obtaining the sample from one or more individuals and determining the
 CC nucleic acid sequence at one or more polymorphic positions in a gene
 CC encoding a protein selected from the group above; (3) constructing (M2)

CC haplotypes using the genes comprising grouping at least two nucleic acids
 CC ; (4) identifying (M3) an individual at risk of developing a disorder
 CC upon administration of an ACE inhibitor and/or vasopressin inhibitor
 CC using the polymorphic data; (5) a library of nucleic acids, each of which
 CC comprises one or more polymorphic positions within a gene encoding a
 CC human protein selected from the group above; and (6) genotyping (M4) an
 CC individual comprising obtaining a nucleic acid sample, determining the
 CC nucleotide present in at least one polymorphic position, and comparing at
 CC least one position with a known data set. The genes, (M1, M2, M3 and M4)
 CC and compositions are useful for detecting, diagnosing, treating,
 CC preventing various disorders such as angioedema and diseases which
 CC involve angiogenesis like haemangiomas, tumours, sarcomas, Crohn's
 CC disease, trachomas, and cardiovascular diseases like angina pectoris,
 CC hypertension, heart failure, myocardial infarction, ventricular
 CC hypertrophy, vascular diseases, aneurysm, embolism, thrombosis, coronary
 CC artery disease, arteriosclerosis and/or atherosclerosis, and
 CC hypersensitivity reactions, sepsis, autoimmune diseases, inflammatory
 CC arthritis, cancer, wounds, viral, bacterial or fungal infection, Chronic
 CC obstructive pulmonary disease (COPD) and enterocolitis (many other
 CC diseases and disorders are listed in the specification). The
 CC polynucleotides are also useful for chromosome identification. Antibodies
 CC against the proteins may be utilised for immunohenotyping of cell lines
 CC and biological samples. The present sequence is a genotyping PCR primer
 CC for the gene encoding one of the proteins listed above

XX New isolated rabbit G protein receptor protein - used partic. to identify
PT agonists or antagonists which can promote or inhibit physiological
PT responses.
PS Disclosure; Page 27; 40pp; English.
XX G protein coupled receptor (GCR) proteins can be used to identify ligands
CC which act as antagonists of GCR/ligand binding. Such ligands can be used
CC for promoting or inhibiting physiological responses such as liberation of
CC arachidonic acid, acetylcholine and endocellular calcium, endocellular
CC cyclic AMP production, production of inositol, changes in cell membrane
CC potential, phosphorylation of endocellular proteins, activation of c-fos,
CC lowering of pH, activation of G protein and cell promulgation. The GCR
CC product can also be used for the detection of ligands and in the
CC production of antibodies and transgenic animals. Two degenerate primers
CC (AA727219, AA727220) were synthesized based on other receptor protein
CC coding sequences in an attempt to amplify the G protein coupled receptor.
CC The resulting amplified fragment was amplified from both sides by the
CC single primer described in AA727219

XX Human amygdaloid nucleus-derived G protein coupled receptor - useful for
PT identifying (ant)agonists used in the treatment of, e.g., Alzheimer's
PT disease, dementia, angina or epilepsy.
XX Example 1; Page 33; 58pp; English.
XX This sequence represents a primer for the coding sequence for the human
CC amygdaloid nucleus-derived G protein coupled receptor (see AA794512) of
CC the invention. The protein and peptide can be used to identify agonists
CC or antagonists useful for creating spinal injury, Alzheimer's disease,
CC asthma, hyperphagia, neuropathy, dementia, pain, cerebral thrombosis,
CC encephalitis, cerebral infarction, cerebrovascular spasm, spodylitis,
CC angina, neurosis, drug dependence, drug and alcohol withdrawal symptoms,
CC schizophrenia, phobia, stroke, anxiety, depression, respiratory distress
CC syndrome, emesis, epilepsy, etc. The DNA encoding it can be used to
CC produce the recombinant protein or peptide, to construct diagnostic
CC probes and primers, and for gene therapy. An antibody directed against
CC the G protein coupled receptor can be used in immunoassays for the
CC protein

XX
XX Ligand peptide for G protein-coupled receptor - acts by modulating
XX function in the central nervous system, pancreas and pituitary gland.
XX
XX Example 1; Page 101; 258pp; English.
XX
XX AAV02406 and AAV02405 are degenerate PCR primers designed to amplify a
XX large number of G protein-coupled receptor protein sequences for
XX comparative sequence study. Such sequences are used in ligand assays to
XX monitor ligand binding to receptor proteins. Pharmaceutical compositions
XX containing such ligands may be used as a pituitary functional modulator, a
XX central nervous system modulator or a pancreatic function modulator.
XX These ligands could have specific applications as a prophylactic or
XX therapeutic agent for dementia, depression, hyperkinetic syndrome,
XX disturbance of consciousness, anxiety syndrome, schizophrenia, trauma,
XX growth hormone secretory disease, hyper- and polyphagia, diabetes,
XX hypercholesterolemia, hyperglycemia, hyperlipidemia, renal disease
XX hyperprolactinemia, pancreatitis, cancer, Turner's syndrome, neurosis,
XX rheumatoid arthritis, spinal injury, transient brain ischemia, epilepsy,
XX amyotrophic lateral sclerosis, acute myocardial infarction, infertility,
XX spinocerebellar degeneration, bone fracture, trauma, atopic dermatitis,
XX osteoporosis, asthma, and/or oligosaccharia. Assays can also be developed
XX to screen compounds which are capable of altering the binding activity of
XX the ligand thus affecting activation of the G protein-coupled receptor
XX protein

XX
XX New polypeptide ligand for orphan G protein coupled receptors - used for
XX treating disorders of central nervous system, pituitary and pancreas, and
XX for drug screening.
XX
XX Example 1; Page 95; 206pp; English.
XX
XX The invention relates to a murine pituitary-derived ligand polypeptide
XX which is a ligand for the G-protein coupled orphan receptor designated
XX GPR10 (human) or UHR-1 (rat). Cells transformed with a vector containing
XX the ligand polypeptide encoding DNA are used to produce a recombinant
XX ligand polypeptide. The ligand polypeptide, and its fragments, modulate
XX function of the pituitary, central nervous system, pancreas and other
XX tissues and can be used to screen for agents that modulate binding of the
XX polypeptide to the receptor; to quantify the amount of receptor in a
XX sample and to raise antibodies. They may also be used therapeutically,
XX e.g. to treat senile dementia; Alzheimer's, Parkinson's or Huntington's
XX diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs;
XX diabetes; schizophrenia; disorders of growth hormone secretion; cancer;
XX rheumatoid arthritis, epilepsy and many others, also to improve post-
XX operative nutritional status and as vasopressor. Transgenic animals
XX carrying the ligand polypeptide encoding DNA or its mutin are used to
XX study the function of the polypeptide-expressing genes, as models of
XX disease, for drug screening and as source of cell lines. The ligand
XX polypeptide DNA is used as a source of probes and primers; to identify
XX related sequences; in receptor-binding assays; for production of Ab and
XX antisera. Primers AAV81235-236 are used for the PCR amplification of the
XX cDNA encoding a human pituitary-derived G-protein coupled receptor

XX
CC The core region of human NK1R sf was isolated by PCR and sequenced (see
CC AAQ30774-Q30778). The antisense primers hsp345, hsp341, hsp342,
CC hsp341 and hsp342 (AAQ30784-Q30788) were synthesised based on the human
CC core sequence. Human glioblastoma mRNA and each of these primers were
CC used in first strand cDNA synthesis to produce the template for a primary
CC PCR amplification. Primer hsp345 was used with 2 rat sense primers r3p1n
CC and r3p1n (AAQ30779 and AAQ30780) for the primary amplification. The PCR
CC product was then used as template for secondary PCR with the same rat
CC primers and the human antisense primer hsp344 (AAQ30783). The secondary
CC PCR product was the template for tertiary PCR amplification, again using
CC the same rat sense primers but with human antisense primer hsp341
CC (AAQ30782). The amplified DNA fragment hybridised to hsp342 (AAQ30781),
CC indicating it is not a non-specific by-product. The DNA was sequenced and
CC found to encode the human NK1R sf N-terminal region and also contains a
CC 5' UTR. (Updated on 25-MAR-2003 to correct PN field.)

CC Double-stranded cDNA was prepared from human glioblastoma mRNA and large-
CC size cDNA was ligated to EcoRI linkers. Linker-ligated cDNA was then
CC ligated to the calf intestinal phosphatase-treated EcoRI site of the
CC vector Bluescript SK+. The ligated plasmid DNA was used as template in a
CC primary PCR amplification with human primers hsp341 and hsp342
CC (AAQ30789 and AAQ30790) and the vector-specific primer t3 (from
CC "Stratagene"). The primary PCR product was used as template for secondary
CC PCR with the human primer hsp343 (AAQ30791) and t3. The product of this
CC reaction was amplified in a tertiary PCR amplification with hsp344
CC (AAQ30792) and vector-specific primer SK (also from "Stratagene"). A
CC 400bp DNA fragment was detected which hybridised to human oligoprobe
CC hsp345 (AAQ30793). This fragment was subcloned and sequenced. It was
CC found to encode the C-terminal region of human NK1R sf and also contains
CC 3' UTR. (Updated on 25-MAR-2003 to correct PN field.)

 CC The core region of human NK1R sf was isolated by PCR and sequenced (see
 CC AAQ30774-Q30778). The antisense primers hsp3a5, hsp3a1, hsp3a2,
 CC hsp3a4 and hsp3a2 (AAQ30784-Q30788) were synthesised based on the human
 CC core sequence. Human glioblastoma mRNA and each of these primers were
 CC used in first strand cDNA synthesis to produce the template for a primary
 CC PCR amplification. Primer hsp3a5 was used with 2 rat sense primers reprim
 CC and rsp3rn (AAQ30779 and AAQ30780) for the primary amplification. The PCR
 CC product was then used as template for secondary PCR with the same rat
 CC primers and the human antisense primer hsp3a4 (AAQ30783). The secondary
 CC PCR product was the template for tertiary PCR amplification, again using
 CC the same rat sense primers but with human antisense primer hsp3a1
 CC (AAQ30782). The amplified DNA fragment hybridised to hsp3a2 (AAQ30781),
 CC indicating it is not a non-specific by-product. The DNA was sequenced and
 CC found to encode the human NK1R sf N-terminal region and also contains a
 CC 5' UTR. (Updated on 25-MAR-2003 to correct FN field.)

PT substances that bind to substance P receptor, and to determine substance
PT P in body fluid of arthritis patients.
XX
PS Disclosure; Page 8; 35pp; English.
XX
CC The sequences given in AAQ29670-82, AAQ29783 and AAQ29746-48 are primers
CC which were used in the isolation of fragments of the human neurokinin-1
CC receptor (NK1R) cDNA. Human NK1R is a membrane receptor for the
CC neurotransmitter substance P. The primers were designed using regions of
CC the human NK1R cDNA and also regions of the rat NK1R which were thought
CC to be similar to human regions. Part of the human cDNA sequence was
CC derived by amplification using these primers. The remaining part of human
CC NK1R cDNA was obtained from a human cDNA library utilising portions of
CC PCR generated fragments as probes. See also AAQ29749. (Updated on 25-MAR-
CC 2003 to correct PN field.)

PT New isolated nucleic acid with at least one polymorphic position, useful
PT for detecting, diagnosing and treating disorders such as angiodema,
```

PT cancer, viral, bacterial or fungal infection, cardiovascular and
PT autoimmune diseases.
PS Disclosure; Page 717; 977bp; English.
XX
XX The invention relates to an isolated nucleic acid from a human gene
XX encoding aminopeptidase P (XPNPE2), bradykinin receptor B1 (BDKRB1),
XX tachykinin receptor B1 (TACR1), C1 esterase inhibitor (C1NH), kallikrein
XX 1 (KLK1), bradykinin receptor B2 (BDKRB2), angiotensin converting enzyme
XX 2 (ACE2), or protease inhibitor 4 (PI4), comprising at least one
XX polymorphic position. Also included are (1) a probe that hybridises to a
XX polymorphic position as provided in the detailed summary of single
XX nucleotide polymorphisms comprising additional 5' and 3' flanking genomic
XX sequence; (2) analysing (M1) at least one nucleic acid sample comprising
XX the sample from one or more individuals and determining the
XX nucleic acid sequence at one or more polymorphic positions in a gene
XX encoding a protein selected from the group above; (3) constructing (M2)
XX haplotypes using the genes comprising grouping at least two nucleic acids
XX (4) identifying (M3) an individual at risk of developing a disorder
XX upon administration of an ACE inhibitor and/or vasopeptidase inhibitor
XX using the polymorphic data; (5) a library of nucleic acids, each of which
XX comprises one or more polymorphic positions within a gene encoding a
XX human protein selected from the group above; and (6) genotyping (M4) an
XX individual comprising obtaining a nucleic acid sample, determining the
XX nucleotide present in at least one polymorphic position, and comparing at
XX least one position with a known data set. The genes, (M1, M2, M3 and M4)
XX and compositions are useful for detecting, diagnosing, treating,
XX preventing various disorders such as angioedema and diseases which
XX involve angiogenesis like haemangiomas, tumours, sarcomas, Crohn's
XX disease, trachomas, and cardiovascular diseases like angina pectoris,
XX hypertension, heart failure, myocardial infarction, ventricular
XX hypertrophy, vascular diseases, aneurysm, embolism, thrombosis, coronary
XX artery disease, arteriosclerosis and/or atherosclerosis, and
XX hypersensitivity reactions, sepsis, autoimmune diseases, inflammatory
XX arthritis, cancer, wounds, viral, bacterial or fungal infection, Chronic
XX obstructive pulmonary disease (COPD) and enterocolitis (many other
XX diseases and disorders are listed in the specification). The
XX polynucleotides are also useful for chromosome identification. Antibodies
XX against the proteins may be utilised for immunophenotyping of cell lines
XX and biological samples. The present sequence is included in the sequence
XX listing but is not referred to anywhere else in the specification
